                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            FEATURE: OTHER INFORMATION: Description of Artificial Sequence:Designed OTHER INFORMATION: peptide to act as kinase substrate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 4, Application US/09174216A

Patent No. 6335176

SCHERAL INFORMATION:
APPLICANT: Ingless James
TITLE OF INVENTION: Incorporation of Phosphorylation Sites
FILE REFERENCE: 1073.050
CURRENT APPLICATION NUMBER: US/09/174,216A
CURRENT FILING DATE: 1998-10-16
NUMBER OF SEQ ID NOS: 8
SOFTWARE: PatentIn Ver. 2.1
SEQ ID NO 4

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            RESULT 5
US-08-488-351A-74
US-08-488-351A-74

Sequence 74, Application US/08488351A

Patent No. 5843446

GENERAL INFORMATION:
APPLICANT: Ladd, Anna
APPLICANT: Zamb, Timothy
TITLE OF INVENTION: Immunogenic LHRH peptide constructs
TITLE OF INVENTION: and synthetic universal immune stimulators for vaccines
NUMBER OF SEQUENCES: 114
CORRESPONDENCE ADDRESS:
ADDRESSER: Maria C.H. Lin
STREET: 345 Park Avenue
CITY: New York
STATE: NY
COUNTRY: US
210-

Sequence 170, Application US/10360101

Patent No. 6864236

GENERAL INFORMATION:
APPLICANT: Moll, Gert N.
APPLICANT: Leenhouts, Cornelis J.
TITLE OF INVENTION: Export and modification of (poly) peptide in the lantibiotic way FILE REPERENCE: 2189-5673
CURRENT APPLICATION NUMBER: US/10/360,101
CURRENT PILING DATE: 2003-02-07
PRIOR APPLICATION NUMBER: EP 20207066.8
PRIOR PILING DATE: 2002-05-24
NUMBER OF SEQ ID NOS: 309
SOFTWARE: Patentin version 3.1
SEQ ID NO 170
LENGTH: 33
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 69, Application US/08446692

Patent No. 5759531

GENERAL INFORMATION:

APPLICANT: Ladd, Anna
APPLICANT: Ladd, Anna
APPLICANT: Ladd, Anna
APPLICANT: Lambchy
TITLE OF INVENTION: and synthetic universal immune stimulators for vaccines
NUMBER OF SEQUENCES: 114

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 RESULT 19

US-08-488-351A-99

US-08-488-351A-99

Sequence 99, Application US/08488351A

Patent No. 5843446

GRNERAL INFORMATION:

APPLICANT: Mang, Chang Yi

APPLICANT: Zamb, Timothy

TITLE OF INVENTION: Immunogenic LHRH peptide constructs

TITLE OF INVENTION: Immunogenic LHRH peptide constructs

NUMBER OF SEQUENCES: 114

CORRESPONDENCE ADDRESS:

ADDRESSEE: Maria C.H. Lin

STREET: 345 Park Avenue

CITY: New York
                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

Sequence 10, Application US/08769399;
Sequence 10, Application US/08769399;
Patent No. 597682
GENERAL INFORMATION:
APPLICANT: Cheng, Jill
APPLICANT: Lasky, Laurence A.
TITLE OF INVENTION: A NOVEL KAPPA/MU-LIKE PROTEIN TYROSINE
TITLE OF INVENTION: PHOSPHATASE, PTP LAMBDA
NUMBER OF SEQUENCES: 10
CORRESPONDENCE ADDRESS:
ADDRESSEE: Genentech, Inc.
STREET: 460 Point San Bruno Blvd.
CITY: South San Francisco
STATE: Culifornia
COUNTRY: United States
STATE: The PAOR States
COMPUTER READABLE FORM:
MEDIUM TYPE: PLODS/MS-DOS
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/769,399
FILING DATE:
CLASSIFICATION: 435
ATTORNEY/AGENT INFORMATION:
MANH: Dreger, Ginger R.
REGISTRATION NUMBER: 33,055
REEFERRENCE/CONTYNICATION NUMBER: P1033
TELECOMMUNICATION NUMBER: P1033
TELESPACE CHARACTERISTICS:
LINFORMATION FOR SEQ ID NO: 10:
SEQUENCE CHARACTERISTICS:
LINFORMATION FOR SEQ ID NO: 10:
SEQUENCE CHARACTERISTICS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                RESULT 36

Patent No. 5759531

GENERAL INFORMATION:
APPLICANT: Ladd, Anna
APPLICANT: Anna, Chang Yi
APPLICANT: Ladd, Anna
TITLE OF INVENTION: Immunogenic LHRH peptide constructs
TITLE OF INVENTION: and synthetic universal immune stimulators for vaccines
TITLE OF SEQUENCES: 114

CORRESPONDENCE ADDRESS:

Patent No. 5643446

GENERAL INFORMATION:
APPLICANT: Ladd, Anna
APPLICANT: Ladd, Timothy
TITLE OF INVENTION: Immunogenic LHRH peptide constructs
TITLE OF INVENTION: and synthetic universal immune stimulators for vaccines
NUMBER OF SEQUENCES: 114
CORRESPONDENCE ADDRESS:
ADDRESSER: Maria C.H. Lin
STREET: 345 Park Avenue
CITY: New York
                                                                                                                                                Sequence 100, Application US/08446692

Patent No. 575951

GENERAL INFORMATION:
APPLICANT: Ladd, Anna

```
The present sequence represents carboxy-amidated gastrin-17. Treatment of gastrin-17-dependent gastrointestinal tumours comprises administering to immunogen an anti-gastrin 17 (G17) immunogenic composition. Anti-G17 immunogens raise anti-bodies which bind both the amidated and glycine-extended forms of G17. Neutralisation of progastrin G17-G1y prohormone by the antibodies inhibite the growth of tumour cells dependent on progastrin G17-G1y as growth stimulator or inducer. The method is especially for the treatment of colorectal adenocarcinomas in humans. This novel method is non-invasive, selectively reversible, does not damage normal tissue, does not require frequent repeated treatments and does not cross the blood brain barrier
The invention relates to the obtaining of a potent agonist or antagonist peptide by the replacement of selected amino acids with synthetic achiral amino acids. The present sequence represents a gastrin fragment analogue, where at least one of Tyri2 and Pheir is intended to be replaced by N-benzylgiycine, N-cyclohexylmethylgiycine or the ring substituted
                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Treatment of glycine-extended gastrin-17-dependent gastrointestinal tumours - using anti-G17 immunogenic composition, especially for treatment of colorectal adenocarcinomas.
                                                                                                                                                                                                                                                            tumour; immunogen;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      the sequence represents a synthetic biotinylated peptide substrate for human Janus kinase 3 (JAK3). The invention relates to the use of JAK/STAT (Janus kinase/signal transducer and activator of transcripton) inhibitors other than debromohymenialdisine (DBH) and hymenialdisine (BH) cor inhibiting the progression or the likelihood of developing diseases involving cartilage degradation, and for regulating the expression of pro-inflammatory agents or cytokines in a chondrocyte, and cartilage captures in a cell. A JAK3/STAT inhibitor of the invention is useful for inhibiting progression or likelihood of developing cell-useful for inhibiting progression or likelihood of developing cell-usediated disorders include human T cell leukaemia/lymphoma virus.

(I) are useful for modifying therapeutic peptides e.g. hormones, growth factors and neurotransmitters, to protect them from peptidase activity in vivo for the treatment of various disorders. Endogenous therapeutic peptides are not suitable as drug candidates as they require frequent administration due to rapid degradation by peptidases in the body. Modifying and attaching therapeutic peptides to albumin prevents or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Modifying and attaching therapeutic peptides to albumin prevents peptidase degradation, useful for increasing length of in vivo activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   reduces the action of peptidases to increase length of activity (half life) and specificity as bonding to large molecules decreases intracellular uptake and interference with physiological processes. AABS0829 to AABS2441 represent peptides which can be used in the exemplification of the present invention
                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Protection, endogenous therapeutic peptide; peptidase; conjugation; blood component, modification; succinimidyl; maleimido group; amino; hydroxyl; thiol; hormone; growth factor; neurotransmitter.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        present invention describes a modified therapeutic peptide (I)

Reagent for phosphorylating a compound, comprises a moiety that is specifically reactive with reactive site chain of the compound, a linking moiety and a peptide sequence comprising kinase substrate.
         Protein kinase A (PKA) substrate #3.
                               Protein kinase A; phosphorylation.
                                                                                                                                                                                                                                                                                                                     Disclosure, Col 8; 26pp; English.

           ö
                                                                                                                                                                                                                                                                                                                                                                                                                 Assay for detecting phosphorylation and dephosphorylation modification of proteins by contacting luminescence peptide with a binding partner and measuring change in luminescence polarization.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to detecting addition or removal of a phosphate group to or from a substrate. The method involves contacting a luminescent peptide with a binding parture that binds specifically to a phosphorylated peptide without regard to the particular amino acid sequence of the peptide. The method is useful for detecting phosphorylation and dephosphorylation modifications of proteins, including kinases and phosphatases. The methods can be used to study the kinase activity of different receptors e.g. the insulin receptor and to find agonists and antagonists of these receptors

The invention relates to a reagent (I) for incorporation of a phosphorylation site by reaction with a reactive side chain of a compound to be phosphorylated. (I) comprises a structure A-B-C, where A is a moiety that is specifically reactive with a reactive side chain, C is a peptide sequence comprising kinase substrate, and B is a linking moiety selected from any one of the 19 compounds given in the specification e.g. N-gamma-maleimidobutyryloxy-succinamide ester. (I) is useful for phosphorylation, by reacting (I) with a compound to be phosphorylated compounds a protein kinase under phosphorylating conditions comprising 32P-phosphate or 33P-phosphate. The phosphorylating conditions are useful in assays such as drug discovery. The method is suitable for adioactively phosphorylating already synthesised proteins, without the need to carry out recombinant methods to incorporate an amino acid sequence. The method is highly adaptable and can be used to phosphorylate compounds that contain reactive site groups. (I) a violate phosphorylation of proteins having an inaccessible kinase substrate sequence as can result from known recombinant methods. Introduction of multiple phosphorylation sites in proteins is a protein of the method in site in proteins is a protein method in miliphe merelly by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                increasing the ratio of reagent to protein, and the method of phosphorylating does not interfere with the protein's function or becom inaccessible as a result of protein folding. The method allows labeled products to be obtained that have a higher specific activity that is normally obtained with recombinant methods. The present sequence represents a protein kinase A (FKA) peptide substrate used in examples that demonstrate the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New disubstituted pyrazine useful for treating a protein kinase associated disorders e.g. allergic asthma, rheumatic disease, systemic lupus erythematosus and rheumatoid arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to bisubstituted pyrazine compounds. The compounds potentially modulates protein kinase signal transduction by affecting the enzymatic activity of RTKs, CTKs and/or STKs mediated signal transduction pathways. The present sequence represents biotinylated substrate biotin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Disclosure; SEQ ID NO 7; 42pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a novel method for immobilizing a functional organic molecule in a predetermined density on a mixed monolayer surface (MMS). The novel method comparises a first monolayer modery (MMI) having a covalent bond forming reactive group and a second monolayer modery (MM2) having an inext group. The method involves contacting MMS with the functional organic molecule and MMI to immobilize the functional organic molecule and MMI to immobilize the functional organic molecule in a predetermined density on a mixed monolayer surface, where the functional organic molecule is selected from coligopeptides, peptides, polypoptides, oligonacic molecule is selected from coligopeptides, carbohydrates, proteins, nucleosides, nucleosides, carponacies, ligands, receptors, antibodies, antigens, lipids, and small molecules, but preferably a carbohydrate. The carbohydrate comprises a reducing end, the reducing end comprises a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Immobilizing functional organic molecule in a predetermined density on a mixed monolayer surface, by contacting the surface with the organic molecule to form a covalent bond and to immobilize the organic molecule.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       peracetylated sugar having an n-pentenyl group. This sequence represents a peptide which binds to the chemoselective self-assembled monolayer's (SAM's) at the E-terminal, relating to the novel method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                    immobilizing, functional organic molecule, predetermined density;

```
The present invention relates to injectable liposomal compositions (1) for delivery of a water-soluble substance e.g. immunomimic peptides. (I) comprises several liposomal vesicles comprising a high weight ratio of a lipid to an encapsulated water-soluble substance so as to achieve a high efficiency of encapsulation. The immunomimic peptide is chosen from gastrin G-17 (ADH892056 to ADH89213) and ADH89223), gastrin G-34 (ADH89217-ADH89219), and human chorionic gonadotropin (hCC) peptide (ADH89221-ADH89224), and human chorionic gonadotropin (hCC) peptide (ADH89221-ADH89224), and ADH89225). (1) comprising vaccines directed against hormone or hormone cognate receptors, where the vaccine comprises at least one: creating gastroincestinal malignancy, and non-gastrointestinal tumors such as thyroid and lung cancer; or GaRH or hCG immunomimic peptide is useful as contraceptive and for treating cancers in male and female
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    substance e.g. vaccine for preventing pregnancy, comprises several liposomal vesicles comprising a high weight ratio of lipid to encapsulated water-soluble substance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Injectable liposomal composition for delivery of a water-soluble
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 T helper cell epitope, B cell epitope, Antibacterial, Antiulcer, Antinfertility; Vaccine, antibody.

The invention relates to a binding solution (BS), comprising a 1,2-bis(2-aminophenoxy-)ethane-N,N,N'.N'-tetraacetic acid (BAPTA) metal chelating part, or a phosphate-binding compound having a chemical part, linker and metal-chelating part, salt comprising trivalent metal ions and an acid.

The (BS) is useful for binding a phosphorylated target molecule in a sample, detecting an immobilised phosphorylated target molecule in a sample, detecting an immobilised phosphorylated target molecule. The (BS) is also useful in the field of proteomics, molecular biology, high throughput screening and diagnostics. The (BS) is useful for analysis and conjucting of phosphorylated target molecules. The (BS) is useful for analysis and conjucting of phosphorylated target molecules. The (BS) is useful for animal sample for diagnostics. The (BS) is useful for animal sample for diagnosts of disease, progression of disease, and/or animal sample for diagnosts of disease, progression of disease, and/or animal sample for diagnosts of disease, progression of disease, and/or information for the effects of various drugs and compounds on the cellular phosphoprotein status. The (BS) is useful for studying biological phonomena such as signal transductions, mitosis, cell proliferation, etc. The (BS) is useful for generating a comprehensive phosphoprotein carget molecules. The (BS) allows for rapid, sensitive, and non-radioactive detection of variety of selected kinases and phospharses. The (BS) allows for rapid, sensitive, and non-radioactive detection of variety of selected kinases and phospharses. The (BS) allows for rapid, sensitive, and non-radioactive detection of variety of selected kinases and phospharses. The (BS) allows for rapid, sensitive, and non-radioactive detection of variety of selected kinases and phospharses. The (BS) allows for high-throughput screening. The present sequence
                                                                                                                                                                                                                                                                                                                                                        Binding solution useful for binding, detecting and isolating hosphorylated target molecules, comprises metal chelating part or phosphate-binding compound having chemical part, linker and metal-chelating part, salt and acid.
                                                                                                                                                                                                                            Liu J, Martin V;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Exemplary peptide ligand for proteome analysis #60.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                     The present invention realtes to a lipopeptide comprising polypeptide conjugated to lipid moieties, where polypeptide contains amino acid sequence of T helper cell epitope and B cell epitope, where amino acid sequences are different, and internal lyshe residues or internal lyshe analog residues for covalent attachment of each of lipid moieties through kegr; amino group or terminal side chain group of lysine or lysine analog. The peptides are useful in eliciting the production of antibody against an antigenic B cell epitope in a subject, and are useful for antibody production, synthetic vaccine production, diagnostic method employing antibodies and antibody ligands and immunotherapy for veterinary and human medicine. The method efficiently elicits the production of antibody against antigenic B cell epitope. The present sequence represents a novel immunogenic lipopeptide comprising T helper
                                                                                                                                                                            Novel lipopeptide comprising polypeptide having amino acid sequence of helper cell epitope and B cell epitope, conjugated to lipid moieties, useful for eliciting immune response against group A Streptococcus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        phosphopeptide; binding solution; high-throughput screening; cellular phosphoprotein status; signal transduction; mitosis; cell proliferation; phosphoprotein expression profile.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Length 17;

The present invention relates to a method for identifying drug non-target biomolecules in a mixture of biomolecules. The method comprises interacting mixture with capture compounds having moiety X which covalently binds to biomolecules with high affinity, moiety Y that increases selectivity of binding so that the capture compound binds to deprive and moiety Z for presenting X and Y, and analysing captured biomolecules, and moiety Z for presenting X and Y, and analysing also optionally comprises a sorting function moiety Q and or a solubility function moiety W. The selectivity function moiety Q and or a solubility the reactivity function by reducing the number of groups to which the reactivity function moiety N bind, such as by steric hindrance and other interactions. Y is optionally a peptide ligand (ADR42112-ADR42256).
                                                                                                                                                                                                                                                                                                                                    Identifying drug non-target biomolecules in mixture of biomolecules involves interacting mixture of biomolecules with capture compounds having high binding affinity and analyzing captured biomolecules to identify drug non-targets.

The invention relates to determining the total amount of gastrin or free gastrin hormone in a biological fluid sample. The method involves (a) obtaining a biological fluid sample comprising a gastrin hormone from a patient; (b) providing an immobilized antibody that selectively binds a C terminal epitope of the gastrin hormone; (c) incubating the sample in the produce an immobilized complex of the antibody to produce an immobilized complex of the antibody to produce an immobilized complex of the antibody bound to the gastrin hormone; (d) washing the immobilized complex to remove unbound antibody to c produce an immobilized complex of the antibody bound to the gastrin hormone to form an immobilized detectable cand N-terminal sequence gastrin hormone to form an immobilized detectable antibod of gastrin hormone to form an immobilized detectable consideration of gastrin hormone to form an immobilized detectable consideration antibody complex; (e) washing the immobilized detectable consideration and (f) measuring the developed reagent to determine sequence treatment selective antibody and the N-terminal selective antibody and the N-terminal selective antibody and the N-terminal antibody. The gastrin hormone is gastrin-17 (G17) or glycine extended G17 (G17-G1y) and the C-terminal selective antibody and the N-terminal antibody. The gastrin hormone peptides including antibody-bound, in a biological fluid. The constant sequence represents the amino acid sequence of mature G17, the
                                                                                                                                                               Determining total or free amount of gastrin hormone in a biological fluid sample comprises incubating the sample in the presence of an N-terminal sequence gastrin peptide for binding to a C-terminal specific antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          antidiabetic; vasotropic; cerebroprotective; cardiant; antiarrhythmic; antibacterial; immunosuppressive; antinflammatory; gastrointestinal; antibacter; hypotensive; nootropic; neuroprotective; anorectic; dermatological; endocrine; respiratory; hepatotropic; gene therapy; cell therapy; fibroblast growth factor.

keratinocyte growth factor (KGF) agonist and a gastrin composition that keratinocyte growth factor (KGF) agonist and a gastrin compound that comproved alone, and alone, and alone, and alone, and alone and alone, and coptionally a carrier, excipient, or vehicle. The composition provides custained beneficial effects, and is in a form that provides normal blood glucose levels in a subject that persist for a prolonged period of time after administration. The composition further comprises amounts of a KGF agonist and a gastrin compound in a form for chronic or acute therapy of a subject in need, where the amounts are suboptimal relative to the amount of each compound administered alone for treatment of diabetes. The central composition increased survival, or decreased symptoms of a disease or condition, and/or are sustained beneficial effects that composition is useful for the preparation of treatment.

The composition is useful for the preparation of a medicament for the treatment of a condition or disease, such as distinction of acondition and as a strongestic of the such a severe hypoglycaemic episodes, stroke, left ventricular hypertrophy, arrhythmia, bacteraemia, septicaemia, irritable bowel syndrome, functional dyspepsia, diabetes, catabolic changes after curearment failure, fluid retentive states, metabolic changes after infarction, impaired glucose tolerance, hypertension, Alzheimer's disease and obesity. The composition is also used to promote and/or enhance soft tissue growth and regeneration, such as in the print of and obesity the and related products and obesity the decreased such and related products and chance soft tissue growth and regeneration, when the product and contained disorders and obesity changed and periods 
                                                                                                                                                                                                                                                                                                                                   New pharmaceutical composition comprising a keratinocyte growth factor (KGF) agonist and a gastrin compound, useful in treating or preventing diabetes, hypertension, heart failure and obesity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              baldness, hyaline membrane disease and hepatic cirrhosis. The present sequence represents a little gastrin (gastrin-17) peptide sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gape
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   100.0%; Score 103; DB 8; Length 17; 100.0%; Pred. The invention relates to a pharmaceutical composition (I) comprising a gastrin compound (CI) having an extended activity upon administration to comparation with native gastrin. (I) or CI is useful for treating a subject having diabetes, which involves administering CI or a modified gastrin capable of covalently reacting with a serum protein, where the frequency of administering the gastrin. Compound is less than frequency of administration of a native gastrin. The method further involves measuring a physiological indicator of islet neogenesis.

The modified gastrin comprises a sequence of mative gastrin capable of binding to the gastrin comprises a sequence of an anior terminal cysteine or binding to the gastrin serum level compared with the serum level of the aministering CI. (I) contains gastrin compositions having longer active dunction than native gastrin compositions having longer active controlation than native gastrin peptides, and has a longer half-life in circulation in a subject. This sequence corresponds to the wild type gastrin. The peptide used in the invention. (Note: this sequence differs gastrin.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Pharmaceutical composition useful for treating diabetes, comprises a gastrin compound having an extended activity upon administration to a subject in comparison with native gastrin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     100.0%; Score 103; DB 9;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a novel pharmaceutical composition comprising a gastrin compound having an extended activity, upon administration to a subject, in comparison with native gastrin. The compounds of the invention may be useful for treating a subject having diabetes. This involves measuring a physiological indicator of islet neogenesis and fasting blood glucose (FBG). The method further involves decreasing insulin dependency. Furthermore, the compounds may be useful for maintaining an increase in gastrin serum level for an extended period of time. The current sequence is that of the human gastrin-17 wild-type peptide of the invention which may act as a stimulator of the gastrin or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Pharmaceutical composition for treating subject with diabetes, has gastrin compound having extended activity upon administration to subject

This invention describes novel imidazo[1,2-a]pyrazin-8-ylamine derivatives and their salts, solvates, crystal forms, diastereomers and derivatives and their salts, solvates, crystal forms, diastereomers and production also describes 1) a method for identifying a contacting modulation of an activity of a kinase and 2) a derivative and detecting modulation of an activity of a kinase and 2) a method for identifying Btk comprising contacting the organism cell or preparation comprising the contacting kinase with a imidazo[1,2-a]pyrazin-8-ylamine derivative and detecting modulation of an activity of Btk. The derivatives can be used for the treatment of cancer when administered continuatives can be used for the treatment of cancer when administered derivatives are useful for manufacture of a medicament for the treatment of expecially mitomycin C, carboplatin, taxol, claplatin, contactivatives are useful for manufacture of a medicament for the treatment of kinase (Btk) implicated condition, preferably cancer, an autoimmune and/or disorders such as psoriasis, cancer (especially chuma, dog or cat). The derivatives are also useful to treat conditions diseases and/or disorders such as psoriasis, cancer (especially chuma, cancer, breast cancer, ovarian cancer, nead and neck cancer or colorectal cancer, intentional refractory prostate cancer, kidney cancer, head and neck cancer or colorectal cancer, intention and and setting and septic shock. The imidazo[1,2-cresistance or diabetic retinopathy) and septic shock. The imidazo[1,2-cresistance or diabetic retinopathy) and septic shock the imidacological properties such as oral bioavailability, low toxicity, low serum protein binding and continuation and in vivo half-lives this sequence represents a continuation of the serum protein binding and amidated peptide which is a s
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New imidazo(1,2-a)pyrazin-8-ylamine derivatives, useful to treat e.g. cancer, autoimmune condition, inflammatory condition, psoriasis, atherosclerosis, Parkinson's disease, diabetes and septic shock, are
graft rejection; atherosclerosis; Alzheimers disease; diabetes; diabetic retinopathy; insulin resistance; rheumatoid arthritis; Parkinson's disease; septic shock.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Mitchell SA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Length 17;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to a method for isolating a phosphorylated target molecule in a sample. The method involves incubating sample and binding solution and separating phosphorylated target molecules from unphosphorylated molecules from the field of proteomics, molecular biology, high-throughput screening and diagnostics. The present sequence is the non-phosphopeptide used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Isolation of phosphorylated target molecule in sample useful in field of e.g. proteomics, involves incubating sample and binding solution, and separating phosphorylated target molecules from unphosphorylated molecules by chromatography.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           imidazo[1,2-a]pyrazin-8-ylamine; kinase; Btk kinase; cancer; neoplasm; cytostatic; immunosuppressive; antinflammatory; antipsoriatic; immunosuppressive; antinflammatory; antiheumatic; antiparkineonian; neuroprotective; nootropic; antidiabetic; antibacterial; antitumor; immune disorder; autoimmune disease; inflammation; psoriasis; chronic myelocytic leukemia; gastroinestinal tumor; lung tumor; breast tumor; ovary tumor; prostate tumor; renal tumor; head and neck tumor; colorectal tumor;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to pyrazine derivatives and their prodrugs, salts, hydrates, solvates, crystal forms and diastereomers. The pyrazine derivatives are useful for treating tyrosine kinase-associated diseases involving janus kinase (JAK) JAK2, JAK3 or TYK2 (particularly atopy, cell mediated hypersensitivity, rheumatic diseases, other autoimmune diseases/viral diseases, cancer, neurodegenerative diseases and cardiovascular diseases), in medicaments for treating JAK-associated disease states and for treating diseases and conditions associated with inflammation and infection. This sequence represents a kinase biotinylated substrate peptide used in the scope of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  pyrazine derivatives are protein tyrosine kinase inhibitors useful it e.g. rheumatic diseases, atopy, other autoimmune diseases/viral sases, cancer, inflammation, neurodegenerative diseases and

The present invention relates to novel indole-containing derivatives that act as protein kinase inhibitors. These compounds are useful for act as protein kinase inhibitors. These compounds are useful for treating: cancer (e.g. non small-call lung, bladder, head, neck, ovarian, prostate, breast, colorectal, small-call lung, dendtourinary, colorectal, small-call lung, dendtourinary, colorectal, melanoma or glioma); inflammation, inflammatory bowel disease, psoriasis, or transplant rejection; for preventing or treating dementia related diseases (e.g. frontotemporal dementia, disease, wascular dementia, dementia or or graces, predemented constitutions and dementia puglistica), Albaimer's diseases and conditions as associated with kinases; for preventing or treating amyotrophic lateral colerosis, corticobsaal degeneration, bown syndrome, Huntington's clerosis, corticobsaal degeneration, disease, bipolar disease, cryprannuclear palsy, Pick's disease, Niemann-Pick's disease, stroke, head trauma and other chronic neurodegenerative diseases, bipolar disease, corticopticute disorders, depensation, schizophrenia, cognitive decline, age-clated cognitive decline, late-life forgetfulness, memory impairment and androgenetic alopecia, or for treating arthritis (all clampairment and androgenetic alopecia, or for treating arthritis (all clampairment and androgenetic alopecia, or for treating arthritis (all clampairment and androgenetic alopecia, or for treating arthritis (accompounds of the invention.
New indole-containing derivatives useful for treating e.g. Ka
sarcoma, Parkinson's disease, stroke, depression or hair loss
                                                                                                                                                                                                       Example, Page 87; 179pp; English.

The present invention relates to an affinity-binding assay for selecting antigen specific immune cells. The method involves contacting particle such as a cell having four copies of target molecule with two binding molecules specific for the target molecule, where first of the binding molecules is associated with a first label and a second of the binding molecules is associated with a second label, detecting cells staining with each label and selecting cells binding both labels. The invention also provides a method for detection of early B cell populations in vaccine development. The invention is useful for the preparation of an antibody. The present sequence is a gastrin peptide. This sequence is an immunogenic peptide used as a vaccine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Affinity-binding assay for selecting antigen specific immune cells, by contacting cell having four copies of target molecule with two labeled binding molecules, detecting cells staining with each label, selecting cells binding both labels.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Glycine-extended gastrin-17; gastrointestinal tumour; immunogen; colorectal adenocarcinoma; antibody; progastrin; cholecystokinin B; anti-gastrin-17; anti-G17.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention comprises a method of determining etiology of an autistic epectrum disorder in a patient. The method involves determining the level of an infectious agent, toxic chemical, or dietary protain derived antigen, or their antibodies in samples of patient, and comparing antigens/antibodies levels with normal levels of antigens/antibodies from control subjects. The method of the invention is useful for determining the etiology of an autistic spectrum disorder, such as autism, pervasive development disorder and Asperger's syndrome. The present amino acid sequence represents a peptide that was used in the exemplification of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence represents glycine-extended gastrin-17. Treatment of glycine-extended gastrin-17 (G17-G1y)-dependent gastrinitestinal tumours comprises administering an anti-gastrin 17 (anti-G17) immunogenic composition. Anti-G17 immunogens raise antibodies which bind both the amidated and glycine-extended forms of G17. Neutralisation of progastrin G17-G1y prohormone by the antibodies inhibits the growth of tumour cells dependent on progastrin G17-G1y as growth stimulator or inducer. The method is especially for the treatment of colorectal adenocarcinomas in humans. This novel method is non-invasive, selectively reversible, does not does not cross the blood brain barrier
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Cytostatic; Contraceptive; Vaccine; immunomimic peptide; gastrin G-17; gastrin G-34; gonadotropin releasing hormone; GnRH; chorionic gonadotropin; hCG; hormone; gastrointestinal malignancy; thyroid cancer; lung cancer; reproductive system cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                 Treatment of glycine-extended gastrin-17-dependent gastrointestinal tumours - using anti-G17 immunogenic composition, especially for treatment of colorectal adenocarcinomas.
